

About the Tutorial

C++ is a cross-platform language which is used to create high-performance applications.

C++ gives programmers a high level of control over system resources and memory.

In this tutorial we will have a complete picture of the C++.

Audience

This tutorial is prepared for the beginners as well as experience to help them understand basic and advance level of C++ programming. In this tutorial we will cover all of the topic which comes under C++ programming language form basic level to advance level. After completing this tutorial, we will work on live project and after completion of live project we will have a presentation on project and based on that will have a Q&A session.

After completion of project, we will see C++ interview question so it will be helpful at the time of interview.

Prerequisites

Before proceeding with this tutorial, we should have a basic knowledge of oops Concept.
